

Measuring Latitude and Longitude of a given point (X)

Latitude:

1. Measure the distance between the first two intervals in the N-S direction [A]:

$$\text{Distance A} = 1.0625 \text{ inches}$$

2. Count how many minutes occur in that interval:

$$\text{Distance A} = 48^{\circ}35'00'' - 48^{\circ}37'30''$$

$$\text{Distance A} = 2 \text{ minutes } 30 \text{ seconds} = 2.5 \text{ minutes}$$

So now you have: $\frac{1.0625 \text{ inches}}{2.5 \text{ minutes}}$

3. Measure the distance to the point you want to measure [B]:

$$\text{Distance B} = 1.327 \text{ inches}$$

4. Now you want to determine B in decimal degrees:

So now you have: $\frac{1.327 \text{ inches}}{X \text{ minutes}}$

5. Now calculate the distance in decimal degrees that occurs over that time by setting the 2 equations equal to each other then cross multiply:

$$\frac{1.0625 \text{ inches}}{2.5 \text{ minutes}} = \frac{1.327 \text{ inches}}{X \text{ minutes}}$$

$$1.0625 (X) = 3.3175$$

$$X = 3.122 \text{ minutes}$$

6. Convert to minutes and seconds (if needed):

Multiply everything after the decimal by 60:

$$3.122 \text{ minutes} = 3' 7.3''$$

7. Add the measured distance to the distance that you measure from in B:

(Since we measure down from the larger number we subtract from the top number)

$$48^{\circ}37'30'' - 3'7.3'' = 48^{\circ}34'22.7''$$

8. Add label:

(All points in the US are labeled N (because north of equator) and W (because west of England))

$$\text{Latitude} = 48^{\circ}34'22.7''\text{N}$$

Longitude:

9. Now do everything again in the E-W direction:

$$C = 122^{\circ}20' - 120^{\circ}22'30'' = 2.5 \text{ minutes}$$

$$C = 0.8125 \text{ inches} \qquad D = 0.9375 \text{ inches and X minutes}$$

$$\frac{0.8125 \text{ inches}}{2.5 \text{ minutes}} = \frac{0.9375 \text{ inches}}{X \text{ minutes}}$$

$$0.8125 (X) = 2.34375$$

$$X = 2.8846 \text{ minutes}$$

$$= 2'53.1''$$

$$= 122^{\circ}20' + 2'53.1''$$

$$= 122^{\circ}22'53.1''\text{W}$$

10. So now the complete latitude and longitude of X is:

$$(48^{\circ}34'22.7''\text{N}, 122^{\circ}22'53.1''\text{W})$$
